

ASTR 1030

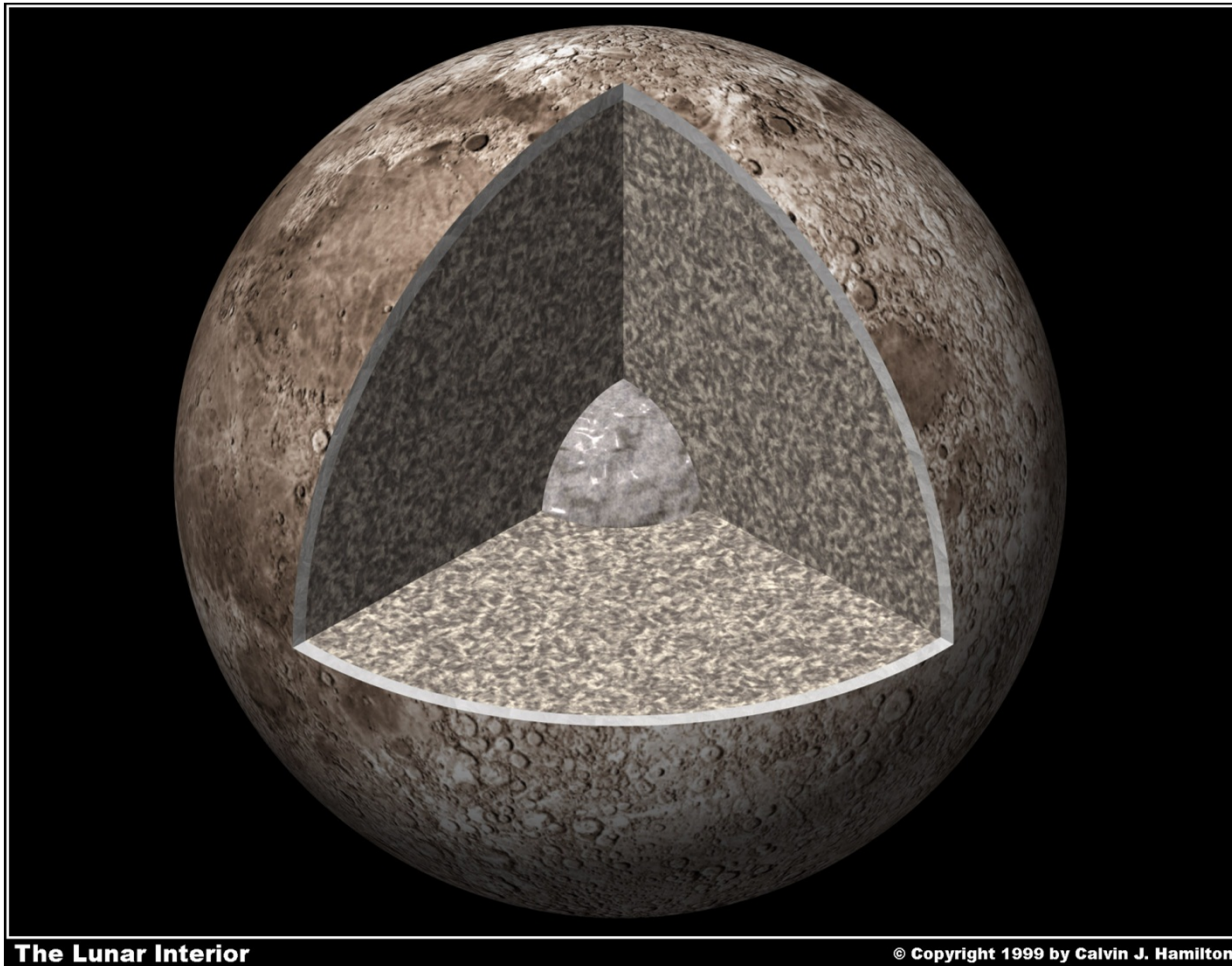

November 1, 2010

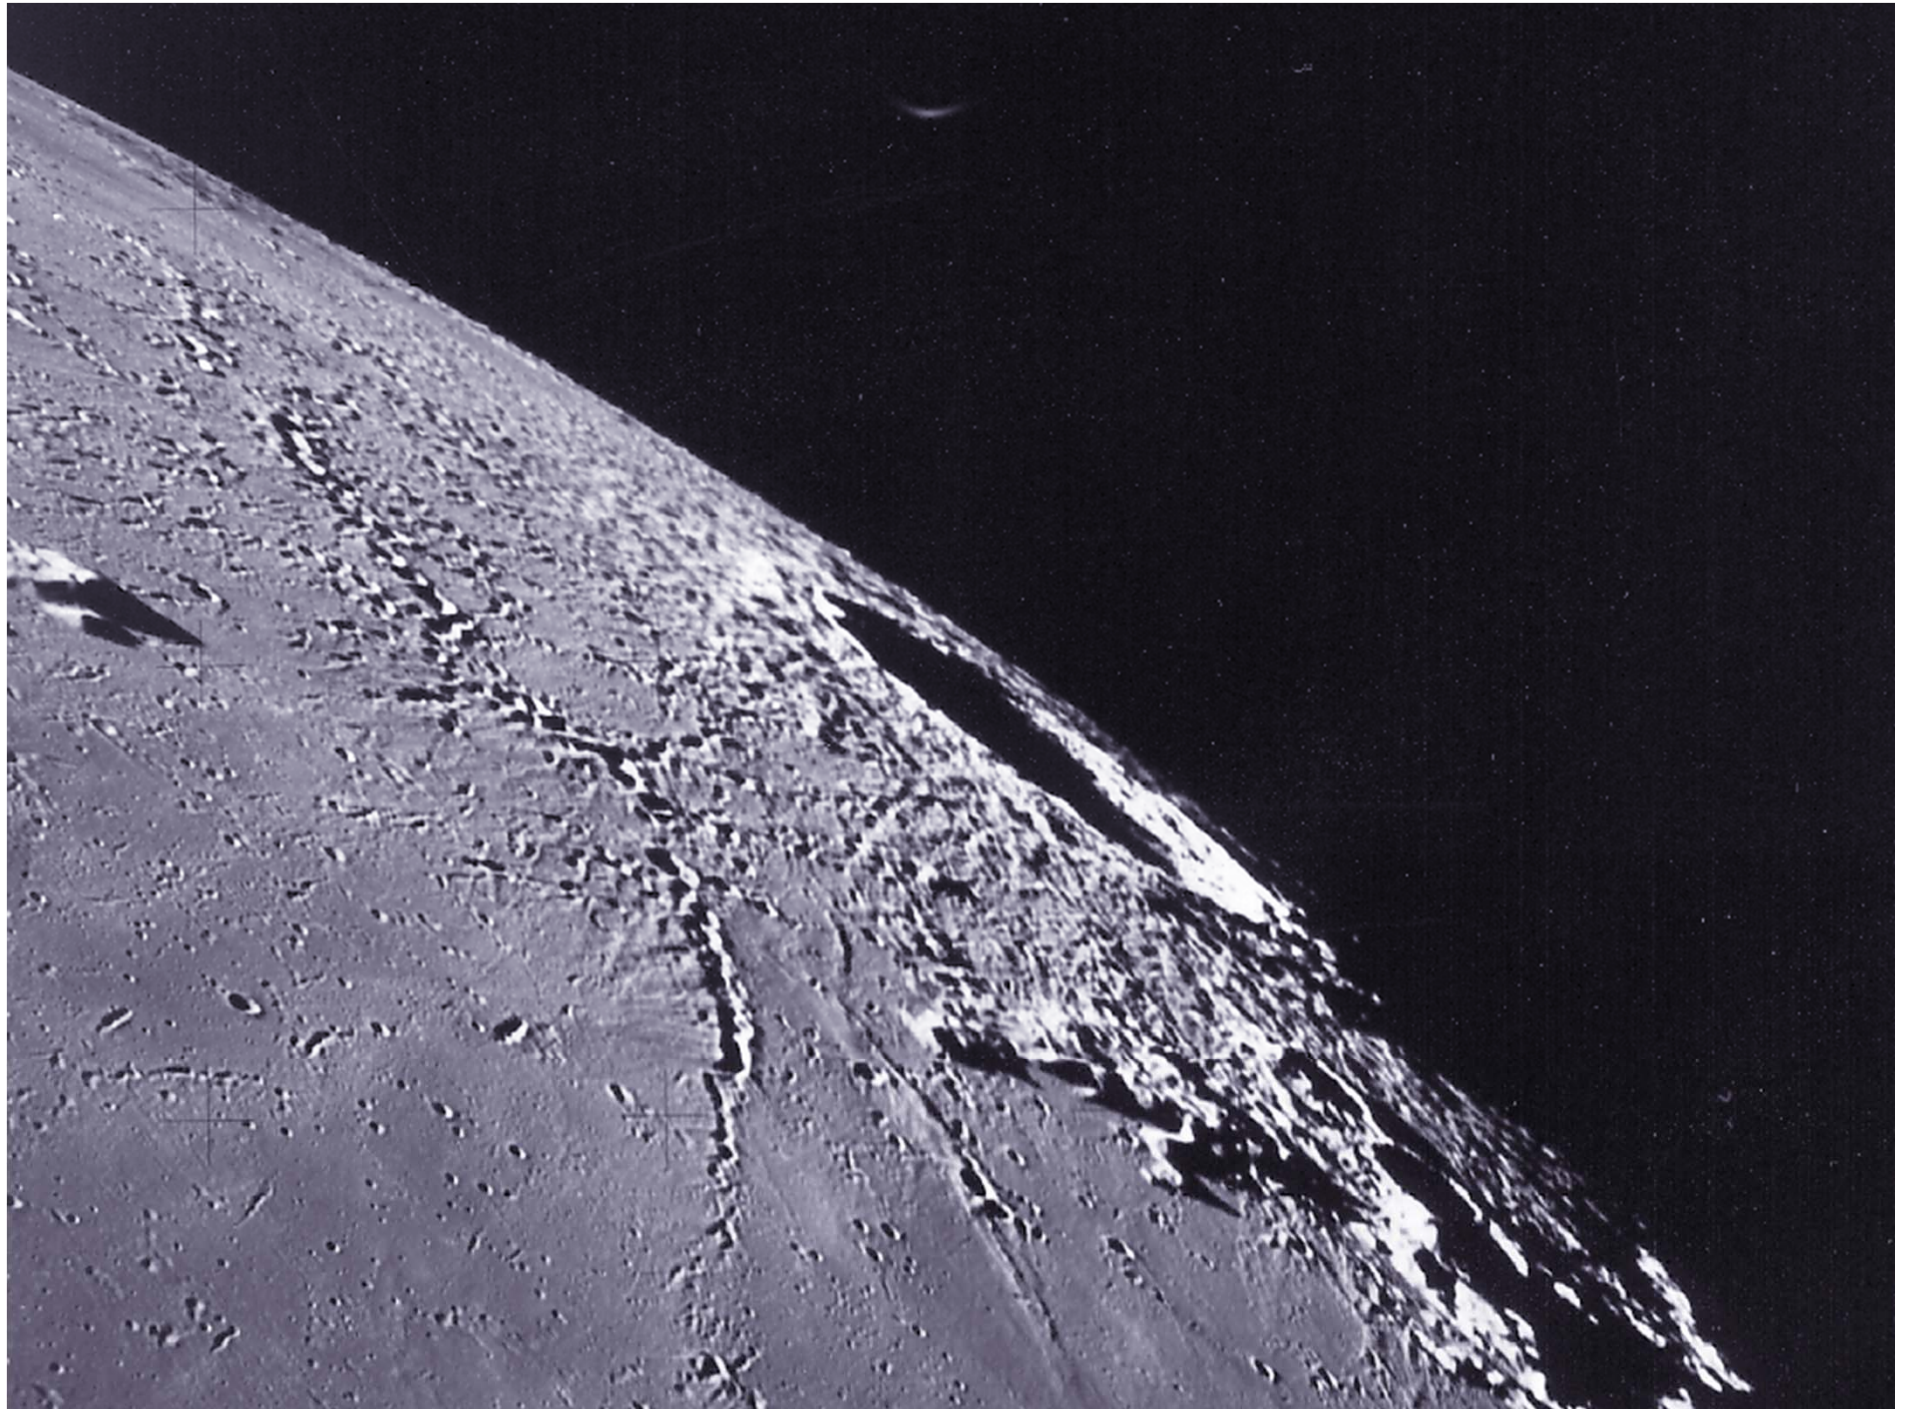

- Just Back – Exams graded this week
- No homework yet. Will announce
- Next three weeks will be the study of the planets individually and as generic examples
- First the terrestrials, then the gas giants

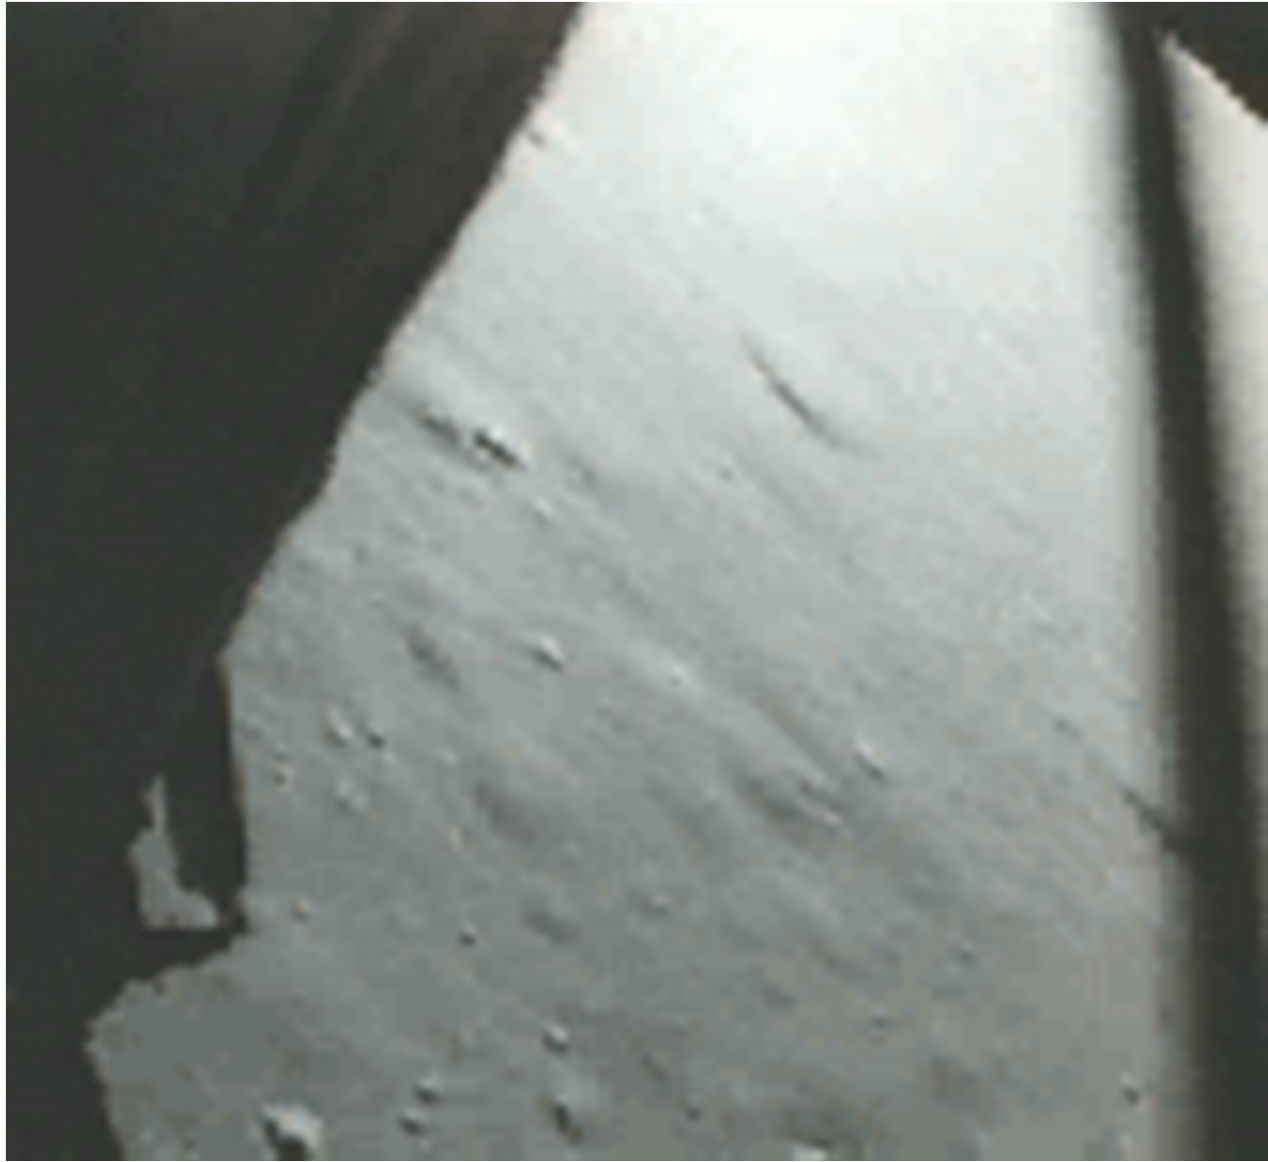

The Lunar Interior

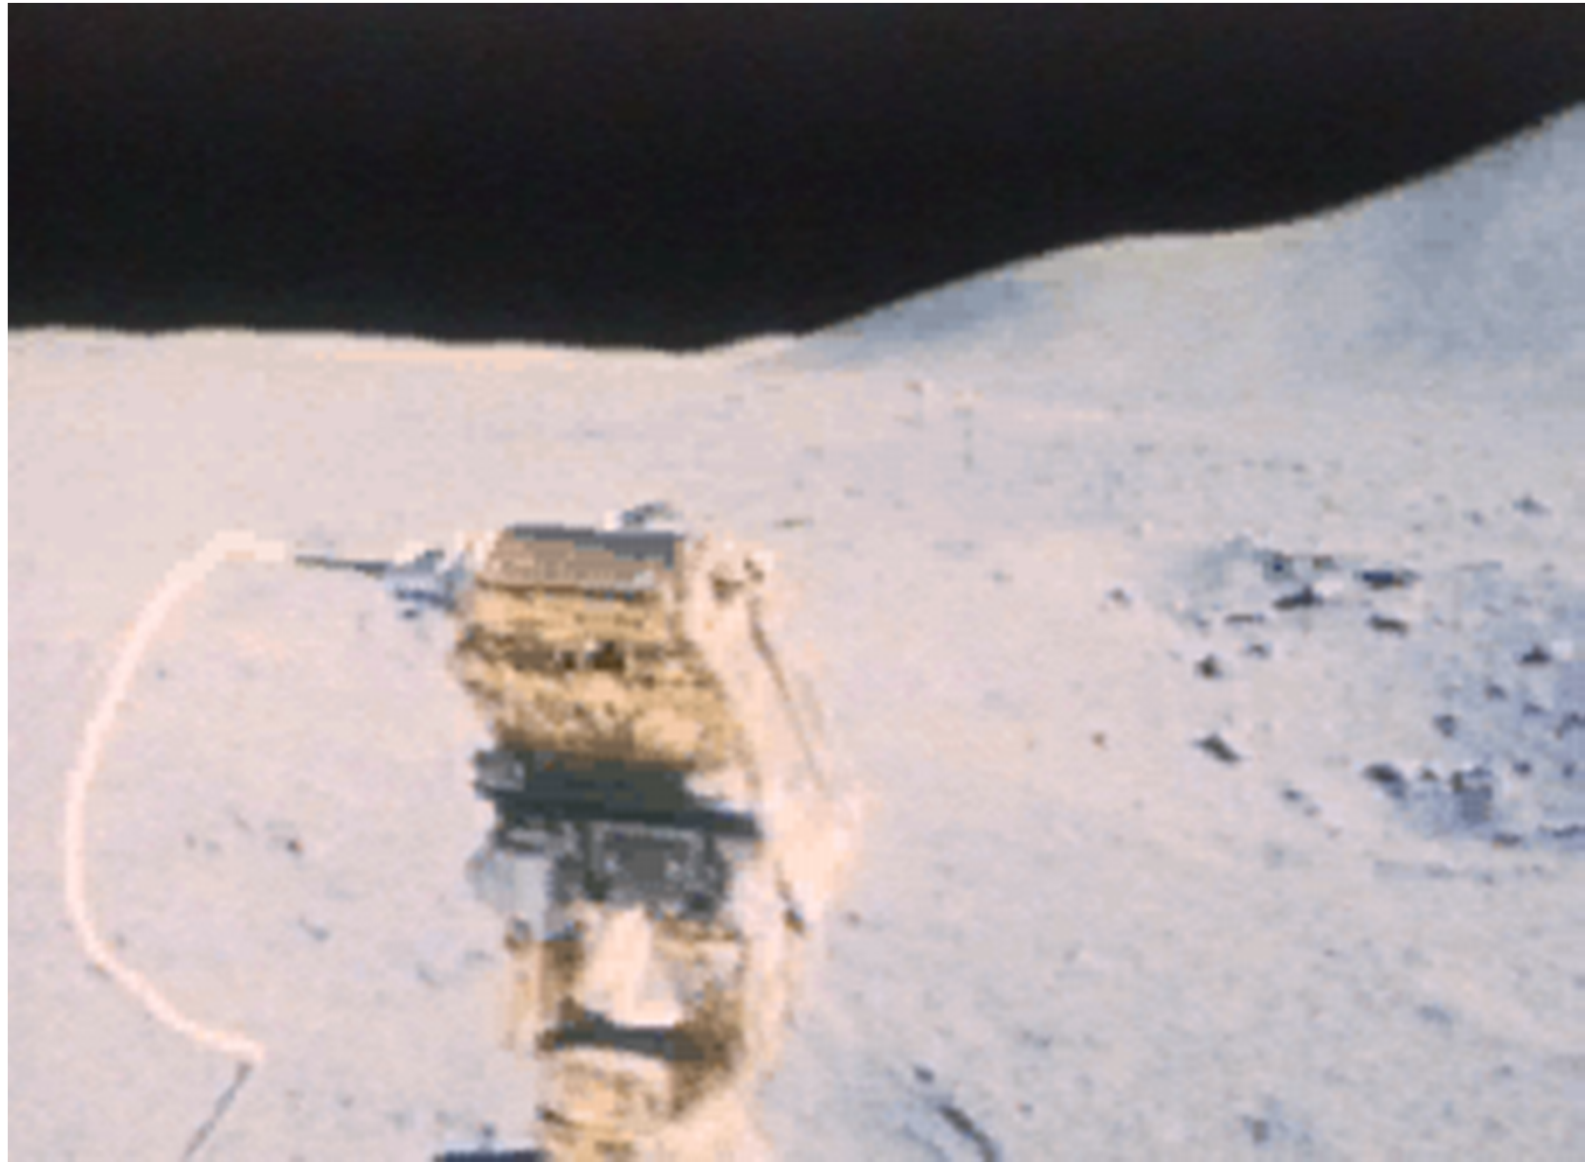

Regolith

- The surface of the moon has been churned by meteor impact
- Megaregolith – deep churning from first 500Million years
- Dust on surface now
